Bridge Installation - Troserch Wood

The following shows the steps taken to complete the bridge installation at Troserch Wood, Nr LLanelli :

Removal of bridge sections from lorry with two 22 tonne 360 degree excavators :

Tracking the two bridge sections to site

Installation begins

*The Old Mill Farm Walk mill's
Church Street, on
P.D.*

Built in Shropshire... Sold across Europe!

The bridge is built in the workshop with both sections bolted together. Allowing the installation team to be sure that the bridge, with its bolt holes fits together on site.

Alignment of bolt holes, requires skilled digger drivers. 24 bolt holes all lined up exactly.

Eight retaining bolts secure the bridge to the footings.

In this case the footings used were 1350mm ID concrete reinforced rings to a depth of 2.5m filled with concrete

Further concrete was added to build up the on and off ramp.
